

E-MedSecure Secure Mail

Introducing Secure Mail™ from E-MedSecure.

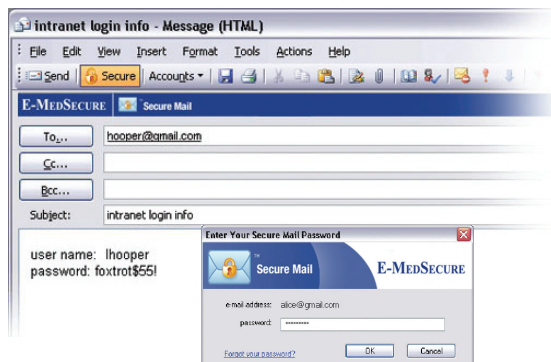

For today's medical practitioners, their practices, and medical institutions e-mail has become one of the most important and frequently used methods of communication. It is more important than ever to ensure that your email messages are sent as securely as possible.

Now, any e-mail user can ensure the safety of their communications quickly and easily, with E-MedSecure Mail. For a low monthly fee, doctors ensure the confidentiality of their patient files and personal communications, and thereby safeguard sensitive data and ensure their adherence to privacy laws. E-MedSecure Secure Mail is a simple plug-in that ensures your e-mail messages are sent securely and can only be read by the intended recipient. With E-MedSecure Mail, doctors gain peace of mind, knowing their own and their patients confidential information will remain secured.

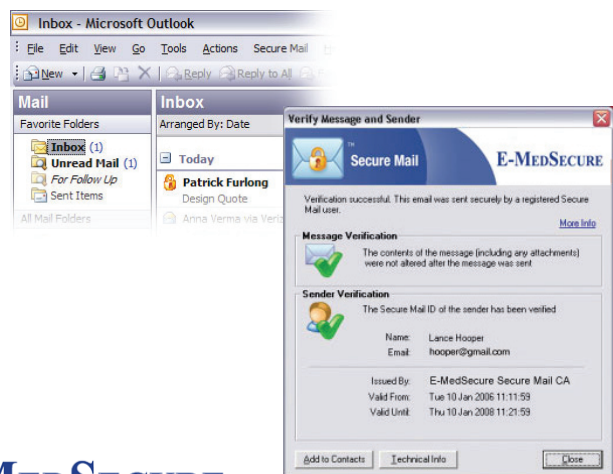

Peace of Mind

With E-MedSecure Mail, you can be confident that only you and your intended recipient can read your e-mail messages. Every e-mail you send is securely encrypted with state of the art encryption technology. This means that only the person you addressed the e-mail can unlock it. What's more, recipients of your e-mail can be sure that you sent it — not someone pretending to represent you, your office, or your institution.

Privacy is now mandated by law

Governments in the US, Canada, and around the world have enacted legislation that protects privacy and requires organizations to safeguard personal information using appropriate measures – including the use of security technology.

- Virtually all private sector organizations in the US and Canada have privacy and security obligations under federal legislation. All public sector organizations also have similar obligations.
- Organizations doing business in the US have to comply with a myriad of industry-specific and state privacy laws, including the Health Insurance Portability and Accountability Act (HIPAA) and the Gramm-Leach-Bliley Act (GLBA).
- California's Security Breach Notification Act (SB 1386) requires disclosure when private personal information has been compromised – unless it is encrypted. This law is being replicated in many jurisdictions.

Why E-MedSecure Secure Mail?

- **Low Monthly Fee:** For the cost of a single courier package, you can send unlimited encrypted e-mail to anyone, anywhere.
- **Peace of Mind:** Secure Mail uses trusted security standards – PKI, X.509 digital certificates and S/MIME
- **Easy to Get Started:** Simply sign up and download the plug-in to your computer. No changes to your e-mail address or your e-mail server are required
- **Send Secure Mail to Anyone:** With Secure Mail, you can easily send encrypted e-mail messages to non-subscribers. The recipient is directed to our Digital Pick-up Centre Web Site where they answer a predetermined question to unlock your e-mail
- **Click to Send:** Just click on the new “Secure” button in your Microsoft Outlook application, and the e-mail will be encrypted before it is sent from your computer
- **Click to Open:** Simply click on your Secure Mail message and enter your password to open
- **Confirm Sender's ID:** Digital signatures guarantee the identity of the sender
